Environment Canada's Environmental Choice Program

Plasti-Fab has developed a certification listing under Environment Canada's Environmental Choice^M Program (ECP) allowing us to apply the EcoLogo^M mark of approval on PlastiSpan insulation board, Advantage ICF System and Insulspan SIP System. Plasti-Fab recognizes that our products are key components in creating an energy efficient building envelope and see our listing under the ECP as emphasizing our commitment to environmental responsibility in the manufacture and use of our products.

The ECP is designed to reduce stress on the environment by encouraging the buying and selling of environmentally preferable products and services. To be certified under the ECP, companies need to demonstrate environmental management. A product is assessed on its total life cycle performance, which includes how a product is made, what it is made with, how it is used, what will happen when it is disposed of and its potential for being recycled.

The EcoLogo^M mark recognizes the 'greener' benefits associated with Plasti-Fab products. The markings below indicate how the logo is used on Plasti-Fab product labeling and brochures.

<p>Certified Climate Protection Made with ECP-Certified Insulation</p>  <p>Certifié pour la protection du climat Fabriqué avec isolant ECP-certifié</p>	<p>Product labeling and brochures for the Insulspan SIP System display the EcoLogo as illustrated to the left.</p>
--	--

The words beside the EcoLogo^M identify the ECP product listings that Plasti-Fab has developed under this program. In order to protect the integrity of our ECP listing, the EcoLogo^M must always be used with the appropriate wording for the product as indicated above.
