

## Product Information Bulletin

### GREENGUARD Certification Program

As part of its commitment to quality and ongoing sustainability initiatives, Plasti-Fab has obtained GREENGUARD Certification for the Insulspan<sup>®</sup> SIP System. The Insulspan SIP (Structural Insulating Panel) System is an energy efficient building system consisting of a PlastiSpan<sup>®</sup> insulation core with oriented strand board (OSB) structurally laminated to the interior and exterior faces.

GREENGUARD certification has been developed with UL Environment, an independent global safety science organization using their process and procedures in accordance with established environment and safety standards.

The GREENGUARD Certification mark on the Insulspan SIP System gives assurance that products designed for use in indoor spaces meet strict chemical emissions limits, which contribute to the creation of healthier interiors. Achieving GREENGUARD Certification gives credence to Plasti-Fab sustainability claims, backing them with empirical scientific data from an unbiased, third-party organization.

The GREENGUARD standard achieved by the Insulspan SIP System includes health based criteria for additional chemicals and also requires lower total VOC emissions levels to ensure that products are acceptable for use in environments such as schools and healthcare facilities.

More information on Plasti-Fab GREENGUARD certified product listings can be found at:
