

TESTIMONIAL

December 2008

When a client approached me about an energy efficient home I did a lot of research & interviewed many companies claiming to have the best product for energy efficiency. I discovered MM&I Construction and Design, Inc. with the Insulspan SIP product and went to Nashville to meet with them. They put me in a comfort zone as they talked about the benefits of the Insulspan SIP homes and how they could support me in the construction process.

There were other SIP manufacturers out there but Insulspan seemed to have the best quality product. Another thing that put Insulspan above some of the rest is that they would cut out the window/door openings and put wire chases in the SIP. This was very helpful as it required no cutting to construct the exterior of the home. It made sense to go with the Insulspan SIP because there is little or no waste during framing and the house is ultimately air tight, which is one of the main factors in an energy efficient home.

I have built 2 Insulspan SIP homes with MM&I and they were very helpful throughout both projects. MM&I helped to correct all drawings and made sure that they complied with all local codes. MM&I provided assistance in planning each project from start to finish and quickly responded to any questions that I had.

They walked me through step by step as to how the home should be constructed. They were also on site as the construction took place to help with any problems. Upon the completion of both projects the homes received energy star certification, which was very easy with the air tight SIP construction. Also, the Insulspan SIP home is much stronger than a stick framed house. It would take a lot to take one down.

I highly recommend that anyone considering building an energy efficient home give MM&I a call. MM&I works with Insulspan to guarantee a great home." Eric Holder, South Carolina
